## **Spis treści**

<b>1. Wprowadzenie .....</b>	7
<b>2. Cel i zakres pracy .....</b>	9
<b>3. Reakcja alkaliów z kruszywem w betonie .....</b>	11
3.1. Mechanizm reakcji .....	12
3.2. Rola otoczki reakcyjnej .....	14
3.3. Mechanizm ekspansji .....	18
<b>4. Czynniki wpływające na reakcję kruszywa z alkaliami .....</b>	23
4.1. Alkalia pochodzące z cementu .....	23
4.2. Kruszywa reaktywne .....	24
4.3. Wpływ temperatury i wilgotności .....	28
<b>5. Metody zapobiegania reakcji kruszywa z alkaliami .....</b>	30
5.1. Wpływ dodatków mineralnych .....	32
5.1.1. Wpływ składu i ilości dodatków mineralnych .....	34
5.1.2. Mechanizm reakcji alkaliów z kruszywem w obecności dodatków mineralnych .....	37
5.1.2.1. Wpływ dodatków mineralnych na przepuszczalność betonu .....	37
5.1.2.2. Ograniczenie zawartości portlandytu na skutek reakcji pucolanowej .....	42
5.1.2.3. Zmniejszenie stężenia sodu i potasu w fazie ciekłej .....	44
5.2. Rola jonów glinu w reakcji kruszywa z alkaliami .....	47
5.2.1. Wpływ glinu na rozpuszczalność krzemionki reaktywnej .....	47
5.2.2. Włączanie alkaliów przez fazę C-S-H i C-A-S-H .....	51
5.2.2.1. Budowa fazy C-S-H i C-A-S-H .....	51
5.2.2.2. Wpływ składu fazy C-S-H i C-A-S-H na wiązanie alkaliów .....	52
5.2.3. Redukcja zawartości portlandytu .....	55
5.2.4. Zmiana właściwości pęcznijących żeli krzemianów alkaliów .....	56
5.3. Wpływ domieszek chemicznych na przebieg reakcji alkalia-krzemionka .....	57
5.3.1. Wpływ litu na ekspansję betonu .....	57
5.3.2. Mechanizm reakcji .....	60
5.3.2.1. Zwiększenie stabilności krzemionki w obecności jonów litu .....	60
5.3.2.2. Modyfikacja składu i właściwości produktów reakcji .....	62
5.3.2.3. Repolimeryzacja żelu .....	65
5.3.2.4. Teoria warstwy podwójnej .....	66

5.3.3. Wpływ jonów litu na skład fazy ciekłej w reakcji alkaliów z krzemionką .....	66
5.4. Ograniczenie reakcji alkaliów z krzemionką poprzez łączne stosowanie dodatków i domieszek chemicznych .....	70
5.4.1. Aktualny stan wiedzy .....	71
<b>6. Współwystępowanie reakcji kruszywa z alkaliami oraz opóźnionego powstawania ettringitu .....</b>	<b>75</b>
6.1. Wpływ jonów litu na opóźnione powstawanie ettringitu .....	76
<b>7. Metody badań reakcji kruszywa z alkaliami .....</b>	<b>79</b>
7.1. Metodyka ASTM .....	80
7.2. Metodyka RILEM .....	83
7.3. Metody oceny skuteczności potencjalnych inhibitorów korozji .....	86
7.4. Metody nieniszczące badania reaktywności kruszyw z alkaliami .....	90
<b>8. Podsumowanie dyskusji literatury .....</b>	<b>98</b>
<b>9. Wyniki badań reakcji krzemionka–alkalia .....</b>	<b>101</b>
9.1. Charakterystyka materiałów użytych do badań .....	101
9.1.1. Cement .....	101
9.1.2. Kruszywo .....	102
9.1.3. Metakaolin .....	104
9.2. Badania wpływu azotanu litu na reakcję krzemionka–alkalia .....	105
9.2.1. Wyniki badań odksztalceń w metodzie przyspieszonej według ASTM C1260 .....	106
9.2.2. Mikrostruktura i skład produktów reakcji .....	107
9.2.3. Wyniki badań odksztalceń w metodzie długoterminowej według ASTM C227 .....	109
9.2.4. Mikrostruktura i skład produktów reakcji .....	111
9.2.5. Podsumowanie wpływu azotanu litu na reakcję alkalia–krzemionka .....	118
9.3. Rola dodatków mineralnych w reakcji kruszywa z alkaliami .....	122
9.3.1. Wyniki badań odksztalceń w metodzie przyspieszonej według ASTM C1260, ASTM C1567 .....	124
9.3.2. Mikrostruktura i skład produktów reakcji w zaprawach z dodatkiem metakaolinu badanych według ASTM C1260 .....	126
9.3.3. Wyniki badań odksztalceń w metodzie długoterminowej według ASTM C227 .....	129
9.3.4. Mikrostruktura i skład produktów reakcji w zaprawach z dodatkiem metakaolinu badanych według ASTM C227 .....	130
9.3.5. Reaktywność pucolanowa metakaolinu .....	135
9.3.6. Skład roztworu w porach zaczynów z dodatkiem mineralnym .....	137

9.3.7. Podsumowanie roli dodatków mineralnych w reakcji kruszywa z alkaliami .....	139
9.4. Równoczesny wpływ jonów glinu i litu na reakcję kruszywa z alkaliami .....	142
9.4.1. Wyniki badań odkształceń w metodzie przyspieszonej według ASTM C1260 .....	143
9.4.2. Mikrostruktura zapraw z metakaolinem i azotanem litu badanych według ASTM C1260 .....	145
9.4.3. Wyniki badań odkształceń w metodzie długoterminowej według ASTM C227 .....	146
9.4.4. Mikrostruktura zapraw z dodatkiem metakaolinu i azotanu litu badanych według ASTM C227 .....	148
9.4.5. Morfologia produktów reakcji .....	150
9.4.6. Skład roztworu w porach zaczynów z metakaolinem i azotanem litu .....	155
9.4.7. Podsumowanie równoczesnego wpływu metakaolinu i litu na reakcję alkalia–krzemionka .....	158
<b>10. Współwystępowanie reakcji alkaliów z kruszywem i opóźnionego powstawania ettringitu w kilkuletnich zaprawach .....</b>	<b>162</b>
<b>11. Wnioski .....</b>	<b>169</b>
Literatura .....	171

## S t r e s z c z e n i e

### **Wybrane aspekty zapobiegania skutkom reakcji alkalia-krzemionka**

Reakcje wodorotlenków sodu i potasu z kruszywami zawierającymi krzemionkę reaktywną wywołują ekspansję i pękanie betonu, prowadząc do jego zniszczenia. Zachodzące reakcje chemiczne i procesy fizyczne, będące następstwem zmian objętości, skutkują zmniejszeniem trwałości betonu. Stąd wynika potrzeba prowadzenia systematycznych badań w kierunku metod zapobiegania degradacji wewnętrznej betonu.

Praca swoim zakresem obejmuje istotne metody zapobiegania pojawiению się ekspansji niszczącej beton, uwzględniające stosowanie związków litu oraz dodatków mineralnych. W szerszym kontekście rozważono rolę jonów glinianowych, pochodzących z aktywnego pucolanowego substytutu cementu w postaci metakaolinu oraz domieszki litowej. Rozważania pogłębianie o wpływ równoczesnego stosowania metakaolinu i azotanu litu na poprawę trwałości betonu. Przedstawiono również istotny problem współwystępowania reakcji alkalia-krzemionka i rekrytalizacji ettringitu, stwierdzony w kilkuletnich zaprawach. Poza licznymi wynikami badania ekspansji w pracy zawarto wyniki obserwacji mikrostruktury oraz zmian w składzie produktów reakcji alkalia-krzemionka i ich umiejscowienia.

Przedstawiona monografia stanowi wkład do nauki o procesach zachodzących w betonie narażonym na korozję wewnętrzną, wzbogacając wiedzę teoretyczną dotyczącą mechanizmów oddziaływanego dodatków mineralnych i domieszek chemicznych jako potencjalnych metod zapobiegawczych. Z pracy wynikają również ważne wskazania zarówno dla badaczy problemu reaktywności kruszyw w betonie jak i praktyków.

## Summary

### **Selected aspects of preventing deterioration from alkali-silica reaction in concrete**

Deleterious expansions and cracking in concrete are induced by the reactions between sodium and potassium hydroxides and aggregates that contain reactive silica. Chemical reactions, as well as physical processes resulting from volume changes, reduce concrete durability. Finding a solution to preventing internal degradation of concrete through further systematic research is imperative.

The scope of the study addresses important methodologies applied to prevent deleterious expansions in concrete. In addition to the use of lithium compounds and mineral additives, the study examines the role of aluminate ions derived from the active pozzolanic cement substitute in the form of metakaolin and lithium admixture. The considerations are further extended to discuss the effects of the combined use of metakaolin and lithium nitrate and respond to the coexistence of alkali-silica reaction and ettringite recrystallization, found in a few years' old mortars. Numerous expansion test results are presented, together with the findings from microstructure observations and those of changes in the composition of alkali-silica reaction products and their location.

This monograph adds to the existing body of knowledge about processes occurring in concrete exposed to internal corrosion, and contributes to theoretical knowledge on the mechanisms of the impact of mineral additives and chemical admixtures as potential preventive methods. The work provides important indications both for the researchers of aggregate reactivity in concrete and for practitioners.
