Table of Contents

Preface	5
Chapter 1. EXPERIMENTAL AND CALCULATION RESEARCH OF DISTRIBUTION OF BUILDING THERMAL STATE CHARACTERISTICS FOR EDUCATIONAL BUILDING IN KYIV	7
1.1. Introduction	7
1.2. Description of the object of study	13
1.3. Experimental definitions of integral and distributed characteristics of the energy state of a building	15
1.3.1. Description of the experimental method for determining the temperature characteristics of the building	15
1.3.2. Results of temperature maps processing	17
1.3.3. The results of the measuring time temperature characteristics of representative spaces	20
1.3.4. Daily outside temperature changes and analysis	23
1.4. Prediction of energy characteristics by regression models	24
1.4.1. Methodology for creating forecasting regression models	24
1.4.2. Weather analysis	25
1.4.3. Investigation of changes in internal air temperature under the influence of various factors	26
1.4.4. Creation of regression models	33
1.4.4.1. Linear multivariate regression dependence for predicting indoor air temperature	35
1.4.4.2. Nonlinear multivariate regression dependence for predicting indoor air temperature	38
1.4.4.3. Nonlinear multivariate regression dependence for predicting heating levels	44
1.5. Experimental and calculation study of the integral and distributed characteristics of the building energy state	45
1.5.1. Diagnosis of temperature and thermal modes of premises	45
1.5.1.1. Mathematical description of the model	45
1.5.1.2. Experimental technique	52
1.5.1.3. Simulation results	57
1.5.2. Distribution of the heat flow from the building's heating system	58
1.6. Determination of intermittent heating management efficiency	64
1.6.1. Regression models for prediction of daily average indoor air temperature	64

1.6.2. Intermittent heating	66
1.7. Conclusions	71
Chapter 2. FORMING THERMOPHYSICAL PROPERTIES OF A MATERIAL	
BY CREATING PREDICTABLE POROUS STRUCTURES	75
2.1. Porous structures and their effect on thermophysical properties of thermal protection elements	75
2.2. Study of pore formation in the raw material mixture	82
2.3. Finding of the generalized equation of thermal conductivity for porous structures	91
2.4. Obtaining claydite with a minimal thermal conductivity coefficient	103
2.5. Method of making an additive to concrete mixtures of pure clay with a minimal coefficient of thermal conductivity	108
2.6. Creation of effective metallic thermal insulation constructions	111
2.7. Design of a mathematical model of transfer of thermal energy through a body with a microporous structure	119
2.8. Conclusions	132
References	136
